ENHANCED HART DEVICE ALERTS IN A PROCESS CONTROL SYSTEM

ABSTRACT OF THE DISCLOSURE

Enhanced HART device alerts enable HART devices within a process control

system to report alarm or alert conditions that are detected within the devices to a

system user or operator using a plurality of intuitive device status conditions, each of
which corresponds to a different level of severity and each of which may require a

different type of response by the system user or operator. The status conditions are
consistent with enhanced Fieldbus device alerts and include a condition associated

with a failure of a HART device, a condition associated with maintenance needed by a

HART device and an advisable action in connection with a HART device.
